FAG CV wheel bearings – new packaging

As part of Schaeffler Automotive Aftermarket's ongoing program to strengthen its brand image, more than 180 wheel bearings for commercial vehicles are getting a new packaging design.

For our dealers and workshops, this means even higher quality and security.

Specifically:

- Better protection against transport damage and protection of sensitive components thanks to more stable boxes
- Simplified handling as a result of reducing the number of packaging sizes from the current 38 down to 10 in the future
- Compliance to industry standards with the "Automotive Bearing" label in eight languages – Arabic, Chinese, German, English, French, Portuguese, Russian and Spanish
- Use of a security label that provides a reliable means of differentiating between original Schaeffler Automotive Aftermarket packaging and counterfeit packaging

New packaging for the FAG commercial vehicle program from Schaeffler Automotive Aftermarket

The full range of European FAG wheel bearings for commercial vehicles is being converted to the new packaging – from individual commercial vehicle wheel bearings to wheel hub assembly modules to repair kits. All article numbers remain unchanged. In future, the new packaging will be expanded to other products as well.
